# PROMINEO TECH

## Relational Databases with MySQL Week 2 Coding Assignment

**Points possible:** 70

| Category | Criteria | % of Grade |
| --- | --- | --- |
| **Functionality** | Does the code work? | 25 |
| **Organization** | Is the code clean and organized? Proper use of white space, syntax, and consistency are utilized. Names and comments are concise and clear. | 25 |
| **Creativity** | Student solved the problems presented in the assignment using creativity and out of the box thinking. | 25 |
| **Completeness** | All requirements of the assignment are complete. | 25 |

**Instructions:** Using a text editor of your choice, write the queries that accomplishes the objectives listed below. Take screenshots of the queries and results and paste them in this document where instructed below. Create a new repository on GitHub for this week's assignments and push this document, with your Java project code, to the repository. Add the URL for this week's repository to this document where instructed and submit this document to your instructor when complete.

**Coding Steps:**

Write queries to address the following business needs.

1. I want to know how many employees with each title were born after 1965-01-01.

2. I want to know the average salary per title.

3. How much money was spent on salary for the marketing department between the years 1990 and 1992?

**Screenshots of Queries & Query Results (only include the last 20 rows):**

```
[mysql> SELECT COUNT(*) AS "Number of Employees", titles.title FROM employees
[    -> INNER JOIN titles ON titles.emp_no = employees.emp_no
[    -> WHERE birth_date > '1965-01-01'
[    -> GROUP BY titles.title;
+---------------------+--------------------+
| Number of Employees | title              |
+---------------------+--------------------+
|                 612 | Senior Staff       |
|                 703 | Staff              |
|                  95 | Technique Leader   |
|                 589 | Senior Engineer    |
|                 657 | Engineer           |
|                  97 | Assistant Engineer |
+---------------------+--------------------+
6 rows in set (0.13 sec)
[mysql> SELECT avg(salary) AS "Average Salary", titles.title FROM salaries
[    -> INNER JOIN titles ON titles.emp_no = salaries.emp_no
[    -> GROUP BY titles.title;
+----------------+--------------------+
| Average Salary | title              |
+----------------+--------------------+
|     59304.9863 | Assistant Engineer |
|     59508.1707 | Engineer           |
|     60543.2675 | Senior Engineer    |
|     69308.4651 | Staff              |
|     70470.2941 | Senior Staff       |
|     59294.3742 | Technique Leader   |
|     66924.2706 | Manager            |
+----------------+--------------------+
7 rows in set (6.85 sec)
mysql> SELECT d.dept_name AS "Department Name", sum(salary) AS "Salary" FROM dept_emp de INNER JOIN departments d ON d.dept_no = d.dept_no
 INNER JOIN salaries s ON s.emp_no = de. emp_no WHERE s.from_date > "1990-01-01" AND s.to_date < "1992-01-01" AND dept_name = "Marketing";

+-----------------+------------+
| Department Name | Salary     |
+-----------------+------------+
| Marketing       | 7361968825 |
+-----------------+------------+
1 row in set (1.75 sec)
```
